

### Energy Savings Initiatives

- o Work with the General Services Administration (GSA) to minimize energy consumption consistent with Department of Energy directives, the Agency's requirements and missions, and GSA guidelines.
  - Identify and achieve minimum lighting levels, assist in controlling the heating, ventilating, and air-conditioning systems to maintain temperatures consistent with Executive guidelines.
  - Identify marginal or inefficient equipment and replace where possible with more modern equipment which is better controlled and specifically designed for the function intended.
  - Plan for and acquire capital to replace marginal and inefficient systems with systems that will both conserve energy and provide a reasonable amortization.
  - Identify to GSA areas in leased buildings where energy consumption may be minimized.
  - Provide energy data to Agency managers so they can minimize energy use consistent with mission objectives.
- o Review all motor pool, shuttle, and courier services with a view towards meeting the 10% automotive fuel savings.
- o Stress alternative modes of transportation for official travel.
- o Intensify employee awareness towards energy conservation.
- o Use various Agency management advisory groups as a conduit for stimulating new ideas in the area of energy conservation.
